To run the program download the GameLauncher.java file that can be found in the program branch and within the ProgramFiles folder. Also download the sample workout from the Workoutfiles folder as well. Currently, the program will need to be run in an IDE such as eclipse, and ran in debug mode for the user interface to display.

Group Participation

Nathan Franklin- Added some parts of code for the workout data storage

(https://github.com/jrb688/Group12_Trainer_Tuesday/tree/master/Workoutfiles)

. Made an SQL build file for the mysql database for adding tables for workouts, host and user data (https://github.com/jrb688/Group12_Trainer_Tuesday/tree/master/server_database_files).

Josh Baker - Reorganized the Github project files as suggested in previous feedback. Updated front end of program and uploaded to Github.
